AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

LISTING OF CLAIMS:

1. (currently amended) A cellular ~~telephon~~ telephone set having a camera and a display portion, comprising:

a waiting screen within said display portion, the waiting screen having an image size corresponding to a waiting screen image;

a memory means for registering images picked-up by said camera, in a picture memorandum mode, as picture memorandum with a size of the picked-up images being a equal to the image size of the waiting screen image;

another memory means for registering other images, taken in a non-picture memorandum mode, for an album as album images with a size of the album images being greater than the images size of the waiting screen image;

a selection means for selecting the picture memorandum mode, and

a registration control means for, upon selection of the picture memorandum mode, automatically generating an icon indicating that the picked-up images are registered upon initially recording said picked-up images in said memory means, displaying the icon on said display portion, and registering

3

subsequently picked-up images <u>in said memory means</u> in association with said icon.

2. (currently amended) The cellular telephone set as set forth in claim 1, which further comprises<u>:</u>

<u>a icon display portion within said display portion and located apart from said waiting screen; and</u>

<u>a</u> display control means for<u>, upon selection of the picture memorandum mode,</u> controlling to display said icon on said <u>icon</u> display portion.

3. (currently amended) The cellular telephone set as set forth in claim 2, which further comprises <u>a</u> read-out control means for reading out one of <u>the picked-up</u> images registered in said memory in response to selecting operation of said icon to display on said waiting screen image.

4. (currently amended) The cellular telephone set as set forth in claim 3, wherein said read-out control means sequentially reads out other images registered in said memory to <u>individually</u> display <u>each image</u> on said waiting screen image according to cursor operation on said display portion.

5. (canceled)

6. (currently amended) The cellular ~~telephon~~ telephone set as set forth in claim 1, wherein said memory has a fixed capacity.

7. (currently amended) The cellular telephone set as set forth in claim 1, which further comprises a means for generating an alarm when a registration amount in said memory reaches [[the]] a maximum registration amount of said memory.

8. (currently amended) A method of controlling operation of a cellular telephone set having a camera and a display portion, comprising:

a selecting step of selecting between i) a picture memorandum mode that picks up images in a size equal to an image size of a display image portion within the display portion, and ii) a album mode that pick up images in a size greater than the size equal to the size of the display image portion within the display portion; and

a registration control step, initiated by selecting the picture memorandum mode, of automatically generating an icon indicating that images are registered upon initially recording said picked-up images in a memory, displaying the icon on said display portion, and registering subsequently picked-up images in association with said icon.

9. (currently amended) The operation control method as set forth in claim 8, which further comprises a display control step of controlling to display said icon on an icon display portion of said display portion, said icon display portion located apart from the display image portion for the picked-up images.

10. (currently amended) The operation control method as set forth in claim 9, which further comprises a read-out control step of reading out one of images registered in said memory in response to selecting operation of said icon to display on ~~said~~ a waiting screen image without resizing said one image.

11. (currently amended) The operation control method as set forth in claim 10, wherein in said read out control step, other images registered in said memory are sequentially read out to display one at a time on said waiting screen image according to cursor operation on said display portion.

12. (currently amended) The operation control method as set forth in claim 9, wherein the size of said picked-up images registered in said memory is equal to [[an]] the image size of ~~said~~ waiting screen image so that the picked-up image may be later displayed in said waiting screen image without resizing.

13. (currently amended) The operation control method as set forth in claim 8, which further comprises <u>a</u> step of generating an alarm when registration amount in said memory reaches [[the]] <u>a</u> maximum registration amount of said memory.

14. (currently amended) A program <u>residing on a computer storage medium</u> for making a computer to execute a method of controlling operation of a cellular telephone set having a camera and a display portion, comprising:

<u>a selecting step of selecting between i) a picture memorandum mode that picks up images in a size equal to an image size of a display image portion within the display portion, and ii) a album mode that pick up images in a size greater than the size equal to the size of the display image portion within the display portion; and</u>

<u>a</u> registration control step of <u>, initiated by selecting the picture memorandum mode,</u> generating an icon indicating that <u>picked-up</u> images are registered upon initially recording said picked-up images in a memory, displaying the icon on said display portion, and registering subsequently picked-up images in association with said icon.

15. (currently amended) The program as set forth in claim 14, which further comprises <u>a</u> display control step of controlling to display said icon on <u>an icon display portion of</u>

7

said display portion <u>located apart from said display image portion</u>.

16. (currently amended) The program as set forth in claim 15, which further comprises <u>a</u> read-out control step of reading out one of images registered in said memory<u>, without resizing said one image,</u> in response to selecting operation of said icon to display on said waiting screen image.

17. (currently amended) The program as set forth in claim [[10]] <u>16</u>, wherein in said read out control step, other images registered in said memory are sequentially read out<u>, without resizing said other images,</u> to display on said waiting screen image according to cursor operation on said display portion.

18. (currently amended) The program as set forth in claim 14, which further comprises step of generating an alarm when registration amount in said memory reaches [[the]] <u>a</u> maximum registration amount of said memory.
